

GranuFil[®]

Particles

STERILE TYPE I COLLAGEN TRIPLE HELICAL STRUCTURE IN PARTICLES FORM

**A cost effective solution for
Acute, Chronic wounds & Diabetic foot ulcers**

GranuFil Particles are lyophilized Type I intact collagen. The increased surface area of GranuFil Particles means they are the most active form of collagen based wound management products.

ROLE OF COLLAGEN IN WOUND HEALING

- Stops Bleeding
- Helps in wound debridement by attracting monocytes
- Provides a Matrix for Tissue and Vascular Growth
- Attracts fibroblasts and helps in directed migration of cells
- Binds with Fibronectin, which promotes cell binding
- Supports growth, differentiation and migration of Keratinocytes
- Helps in deposition of oriented and organized fibres, which increase the integrity of the Tissue

INDICATIONS

- Non-healing ulcers
- Diabetic foot ulcers
- Pressure ulcers
- Traumatic wounds
- Surgical wounds
- Non-infected wounds
- Tunnled wounds

is Available in 5 ml & 10 ml Pack
